

Santiago Jimenez Moncada

Full Stack Developer

Pereira, Colombia | santyjimenez92@gmail.com | 300 3060003 | santiago.paicoders.com
linkedin.com/in/ssantss | github.com/ssantss | gitlab.com/ssantss

professional summary

Full Stack Developer with **~5 years shipping production platforms** for the public sector, LatAm SMBs, and regulated sports betting in Colombia. Expert in **Django + Next.js**, with secondary stack in Vue, Svelte, and Electron. Currently leading an **AI-powered document extraction platform for the City of Pereira** and running my own **SaaS used by ~130 parking lots in 14 countries**. I build end-to-end: from RESTful APIs and LLM pipelines to POS hardware (thermal printers) and WhatsApp integrations.

Solid hands-on experience with **Linux**, **Docker**, and system administration with **Proxmox**. I actively integrate **Claude Code** and **Codex** into my workflow, with applied prompt engineering for code generation, refactoring, and code review.

professional experience

Lead Full-Stack Engineer (Creator & Maintainer), DIGER — Alcaldía de Pereira (Contractor) – Pereira, Colombia Aug 2026 – present

Created and lead digerpereira.com, the platform the city's Disaster Risk Management Office uses to digitize psychosocial census forms of families affected by emergencies and report them to Colombia's national damage registry (RUD/UNGRD). Stack: Django/DRF, Celery, Redis, PostgreSQL, Next.js, React, Anthropic/Mistral/Gemini APIs.

- Architected the system from the first commit and led a team of ~10 contributors; authored **~75% of 690+ commits** and reviewed/merged 100+ PRs in the first 6 weeks.
- Designed an **AI extraction pipeline for scanned forms with multi-provider consensus voting** (Anthropic, Mistral, Gemini) — confidence comes from inter-model agreement, fields without consensus go to human audit, and every auditor correction is logged to measure real accuracy.
- Benchmarked model pairs on real documents to size the 60,000-form workload, picking a setup projected at **~\$2.2K USD and 18 h instead of 179 h (10× faster)**.
- Processed **46,000+ scans** and automated the RUD export to the national registry (**11,000+ families submitted**), replacing manual data entry.
- Own production operations: self-hosted with PM2 and Cloudflare Tunnel, 8 Celery extraction workers, nightly backups, GitHub Actions CI, JWT with 4 roles, and field-level audit history under Colombia's data protection law (Ley 1581).

Founder & Lead Developer, Parquadero.app (Founder) – Pereira, Colombia May 2025 – present

Built and run [Parquadero.app](https://parquadero.app), a SaaS parking-lot management system used by **~130 active parking lots in 14 countries** (~1,600 vehicles per business day). Stack: Django/DRF, PostgreSQL, Next.js, React, Material-UI, Capacitor.

- Sole developer of the product end-to-end (1,700+ commits): billing engine with 5 charging modes (per minute, fractions, tiers, flat, time-slot passes), monthly memberships, merchant validation agreements, and shift/cash-register closing.
- Offline-first PWA plus native **Android app**, with thermal ticket printing over Bluetooth/network (ESC/POS) and barcode exit codes.
- Multi-country and multilingual (currency, license-plate formats, localized landing in 15 languages); SaaS subscriptions and super-admin panel with **17 paying customers**.
- Test suite with 150+ backend test files and offline-mode E2E tests; deployed with PM2 and Cloudflare Tunnels.

Full-Stack Developer, Vatio Libre (Contractor) – New Jersey, USA (Remote)

Jan 2026 – present

Built end-to-end the **Tesla Dashboard**, a management and monitoring platform for Tesla electric vehicles with direct integration to the Tesla Owner API. Stack: Vue.js, Python (Django), Tesla Owner API, OAuth.

- Built the entire Tesla Dashboard from scratch: image gallery with touch navigation, interactive VIN decoder, order system with logistics timeline, and real-time delivery panel with ETA.
- Redesigned the OAuth authentication flow with Tesla Owner API, simplifying a 5-step process into a phase-based interface with automatic popup monitoring.
- Owned the enriched orders panel with financing components, delivery tasks, shareable narrative (Web Share API), and a unified JSON viewer.
- Implemented full internationalization (Spanish/English) with automatic language detection.

Full-Stack Developer, Sileo (Freelance) – Pereira, Colombia

Oct 2024 – May 2025

Led the development of a complete enterprise platform with a distributed architecture. Stack: Node.js/Express, Vue.js/TypeScript, PostgreSQL.

- Designed distributed microservices architecture for integration with the Siesa system (Colombian ERP).
- Built authentication and user management system with dynamic roles.
- Owned the commercial module with real-time synchronization and automated label generation.
- Reduced **label generation time by 90%** via PDF automation.

Full-Stack Developer, Sports Betting Platform (Freelance) – Medellín, Colombia

July 2024 – Apr 2025

Built end-to-end a complete sports betting platform, including user management, real-time transaction processing, and an admin panel. Stack: React.js, Material-UI, Django REST Framework, PostgreSQL.

- Designed a secure betting system with transactional reconciliation and idempotent payment handling.
- Built RESTful API for user, betting, and payment management.
- Designed responsive interface with interactive dashboard and real-time statistics.
- Optimized performance and scalability for multiple concurrent users.

Full-Stack Developer, Metálicas Otálvaro SAS – Pereira, Colombia

May 2024 – July 2024

Built a landing page platform for a metalworking supply store with an integrated quoting system. Stack: Vue.js, Node.js/Express, PostgreSQL.

- Designed and built an optimized landing page with high usability and responsive design.
- Owned the integrated quoting system with automatic PDF generation for commercial proposals.
- Designed Express backend architecture for efficient request handling and PostgreSQL storage.
- Reduced **quote preparation time by 85%** via PDF automation.

Full-Stack Developer, Recibospagos.co – Pereira, Colombia

Dec 2021 – Jan 2025

Led development and maintenance of a platform specialized in product and invoice management. Stack: Vue.js, Django, Python, PostgreSQL, Docker, Next.js.

- Migrated the platform to a **Progressive Web App (PWA)**.
- Built RESTful APIs with Django REST Framework and integrated front-end with back-end components.
- Owned new **Next.js** modules to scale functionality and improve user experience.
- Implemented **web scraping with Django** to extract product catalog data from external e-commerce platforms.
- Refactored legacy code, **migrating jQuery to React**, optimizing performance and client-side maintainability.

Projects

Snowify — Open Source Contributor

Jan 2025 – present

Open source desktop music player based on Electron. **30 PRs merged upstream**, covering full features, bug fixes, and architectural refactors.

- Key contributions: gapless preload crossfade engine, live internet radio system, predictive audio prefetch cache, internationalization (12 languages), drag-and-drop queue redesign, real-time playback indicators, and multi-artist support.
- Extracted a modular architecture from a monolithic codebase, **removing 1,500+ lines** of code.
- AI-assisted development (Claude Code) for implementation, refactoring, and code review.

WhatsApp Messages API

June 2025 – July 2025

Built a RESTful service with **Node.js/Express and Baileys** for automated sending of individual and bulk WhatsApp messages.

- Designed queue system with rate limiting, group management, and AI-generated automated replies via local **Ollama**.
- API Key authentication, OpenAPI 3.0 docs, automatic reconnection, and scalable batch processing.

NotificacionesQR

Jan 2025

Automated **WhatsApp** notification service for QR payments, **Bre-B** transfers (Colombia's instant payment rail), and Bancolombia transactions.

- Real-time email ingestion via **Google Pub/Sub**, transaction parsing, and instant alerts to the business's WhatsApp group.
- Stack: Node.js/Express, Baileys, Gmail API, SQLite, Canvas, PDFKit.
- Daily, weekly, and monthly reports with auto-generated images and professional PDFs.

technical skills

Frontend: Next.js, Vue.js 2/3, Svelte, React, Astro, TypeScript, TailwindCSS, shadcn/ui, Vuetify, Material-UI (Pinia, Vuex, Context API)

Backend: Python, Django, Django REST Framework, Celery, Node.js, Express, FastAPI

Databases & Cache: PostgreSQL, Redis, Firebase, Supabase

DevOps & Infrastructure: Linux, Docker, Proxmox, Nginx, PM2, GitHub Actions, Vercel, Cloudflare Tunnels

Desktop, Scraping & Integrations: Electron, Capacitor, Selenium, Playwright, Baileys (WhatsApp), Pandas, Tesla Owner API, Google Pub/Sub, Gmail API, NextAuth, multi-provider OAuth

AI-Assisted Development: Claude Code, Codex, LLM APIs (Anthropic, Mistral, Gemini), Ollama (local AI), Applied Prompt Engineering

Education

Universidad Tecnológica de Pereira, BSc in Computer Systems Engineering – Pereira, Jan 2009 – Dec 2014
Colombia

Certifications

- Selected Platzi tracks — Python, JavaScript, Vue.js, databases. Certificates at platzi.com/p/saants.

Languages

Spanish: Native

English: B2 (Upper-Intermediate)
